October 28, 2009

Dear Colleague:

We are pleased to present to you this publication of the **2009 Montana County Health Profiles**. The Public Health and Safety Division updates the *Profiles* on a regular basis based on the most recent available data. The *Profiles* provide the Department of Health and Human Services and its community partners county-level data for identifying health needs, establishing plans, and evaluating programs. The introductory section, "Definitions, Sources and Data Use Notes," defines the indicators and sources of the data presented herein. I encourage you to refer to this section often when using the county health profiles.

Based on the recommendations of data users, some changes were made to the county health templates in this edition. Some indicators were determined to be unreliable estimates at the county level and others were found to be consistently reported in other state documents. In the 2009 edition, we have, as in 2006, included a two-page "American Indian Health Profile" in an effort to help describe Montana's largest minority population. In addition, a two-page "Montana and the United States Profile" has been included to allow further county, state, and national comparisons on the various demographic, health status and health resource indicators. Revisions of the *Profiles* will continue to be on-going as valid and reliable data are made available. We want the *Profiles* to be as useful as possible and welcome all comments and suggestions for continued improvement.

The Public Health and Safety Division of DPHHS, 1400 Broadway, B102, Helena, MT 59620, maintains and distributes the County Health Profiles as reference documents. Individual county health profiles as separate .pdf files are available on the DPHHS Health Data and Statistical Information website at <http://www.dphhs.mt.gov/statisticalinformation/index.shtml> or hardcopies can be obtained by calling (406) 444-7374.

We hope that you will find this report useful in helping you plan and execute your public health activities.

Sincerely,

A handwritten signature in black ink, appearing to read "A. Sorrell".

Anna Whiting Sorrell,
DPHHS Director

Contributions and Acknowledgements

All data translation in this document were conducted by staff of the Montana KIDS COUNT Program in the Bureau of Business and Economic Research at the University of Montana in contract with the Montana Department of Public Health and Human Services, in particular:

Compiled by:

Thale Dillon, MS
Director of Economic Research
Montana KIDS COUNT

Colin Sorenson, Graduate Student
Research Assistant
Montana KIDS COUNT

The authors would like to thank the following individuals who generated base data for this report and/or also provided invaluable reviewer comments:

- Bruce Schwartz, MA, MPA, Cody Custis, MS, and David Fulgham, PhD, Office of Vital Statistics, Montana Department of Public Health and Human Services;
- Epidemiologists in the Public Health and Safety Division, including Carol Ballew, PhD, Dianna Frick, MPH, and Heather Zimmerman, MPH;
- John Schroeck, M.Ed, CHES, Primary Care Office, and Jim DeTienne, EMS & Trauma Systems, Public Health and Safety Division;
- Brad Bowers, Licensing Specialist, Montana Board of Medical Examiners, Montana Department of Labor and Industry;
- Eric Higginbotham, Research Analyst, Office of Planning, Analysis and Coordination, DPHHS;
- Susan Ockert, MA, Census and Economic Information Center, Montana Department of Commerce;
- Susan Swanz, Indian Health Services, Billings Service Area;
- Robert N. Anderson, PhD, Chief Mortality Statistics Branch, National Center for Health Statistics, CDC.

A special thanks to the following individuals for their revisions made to initial templates and/or extensive review of final work:

- Steve Helgerson, MD, MPH, State Medical Officer;
- Jane Smilie, MPH, Administrator, Public Health and Safety Division;
- Marge Levine, MS, RD, Data and Information Manager, Montana Primary Care Association;
- Sue Miller, RN, BSN, and members of the Public Health System Improvement Task Force.

DPHHS project coordination and oversight of the 2009 edition of the Montana County Health Profiles was provided by:

- Joanne Oreskovich, PhD, BRFSS Director/Epidemiologist.

This project was supported by the **Preventive Health and Health Services Block Grant** (PHHS BG-#2B01DP009033-09) from the Centers for Disease Control and Prevention of the U.S. Department of Health and Human Services and from the Montana Department of Public Health and Human Services. The contents herein do not necessarily reflect the official views and policies of the U.S. Department of Health and Human Services or the Montana Department of Public Health and Human Services.

Population Estimates for Incorporated Places in Montana by County, 2004-2008A-2	

DATA DEFINITIONS, SOURCES AND DATA-USE NOTES

Montana 2009 County Health Profiles

Data Year: Most County Health Profile information is based on events occurring in calendar year 2008, which is the most current data year, or an average of years 2004-2008. Census population *estimates* were used for 2004-2008 in determining five-year rates (U.S. Bureau of the Census: 2008 estimates released May 2009). Certain data items report *enumerations* from the 2000 Census (U.S. Bureau of the Census).

Data Sources: The specific sources of data are indicated below, with the data definitions. In general, vital data on reported pregnancy outcomes, births, and deaths were provided by the Office of Vital Statistics, Montana Department of Public Health and Human Services (DPHHS). The Office of Vital Statistics receives reports on live births and fetal deaths for all Montana residents, and on induced abortions occurring within the state. There is no provision for reporting spontaneous abortions (miscarriages), regardless of where they occur, or induced abortions that occur outside Montana. Fetal deaths are reportable only after the fetus has reached 350 grams or, if the weight is unknown, 20 weeks of gestation.

Data Reliability: Many Montana counties have small populations and, therefore, the number of events in a given year, or even when summed over several years, is small. Because of the small number of events, rates based on these numbers are likely to be unstable, varying substantially between years or over longer periods of time. To assist in interpreting these rates, five-year average rates (for 2003-2007 or 2004-2008) have been provided. In most cases, these are followed by the absolute number of events for the same period in parentheses. Users of County Health Profiles are cautioned that these data are not intended for forecasting.

Death Rates: This document reports crude death rates throughout (except heart disease, where both crude and age-adjusted rates are reported). Comparison of crude rates over time or between populations may be misleading if significant differences exist in the demographics (e.g., age, race) of the populations being compared; observed differences in rate may result solely from population difference. Nonetheless, crude rates characterize the experience of a population at a given point in time and are useful for planning and funding purposes.

County Description

Health Department and Health Officer: From listings maintained by the Montana Department of Public Health and Human Services (DPHHS) Public Health and Safety Division, accessed August 2009.

Demographics

Population Density and Status: Population density is the calculated number of persons per square mile, based on the U.S. Census estimate of county population in 2008 and county size. An area is considered "Frontier" if the population density is 6 or fewer persons per square mile. A "Rural" area has more than 6 and fewer than 50 persons per square mile. All Montana counties, except Yellowstone, are "Rural" or "Frontier" as defined by population density.

To date, there has not been a consistent definition of the urban—rural—frontier continuum. The designations used in this report were developed by the U.S. Department of Health and Human Services, Bureau of Primary Health Care (1986). Visit the following websites for further discussions on this topic:

National Center for Frontier Communities:

www.frontierus.org

National Agricultural Library Rural Information Center: www.nal.usda.gov/ric/ricpubs/what_is_rural.htm

Urban Population Percent: The percent of the population living in Urbanized Areas or Urban Clusters in 2000. Data are from the 2000 Census's Population and Housing Units Counts, Table 4, the most recent data available. An Urban Area must have a population of at least 50,000, while an Urban Cluster must have a population of at least 2,500 and less than 50,000. Additionally, these densely settled territories must consist of:

- Core census block groups or blocks that have a population density of at least 1,000 people per square mile; and
- Surrounding census blocks that have an overall density of at least 500 people per square mile.

All other territory is classified as "Rural".

Population by Gender, Age and Race: From the U.S. Census estimates of 2008 county and state populations, released in May, 2009. "White" and "American Indian" race categories include those of one race only; "Other" includes all other single-race persons, as well as those indicating two or more races. All Census data were accessed online at www.census.gov.

Median Age by Gender and Race/Ethnicity: The midpoint in the range of ages (i.e., 50% of the persons in the area are the median age or older). Data are from the U.S. Census Bureau Census 2000.

Educational Attainment: From the 2000 U.S. Census enumerations of counties and state.

Unemployment Rate: 2008 unemployment data tabulated for each county by the Montana Department of Labor and Industry, Research and Analysis Bureau (accessed June 2009). www.ourfactsyourfuture.gov.

Median Household Income: 2007 estimates from the Small Area Income and Poverty Estimates (SAIPE) from the U.S. Census; 50 percent of households in the county/state reported this total annual income or less. <http://www.census.gov/did/www/saipe/index.html>.

Per-Capita Income: Per-capita income in 2007 is the mean income of every man, woman and child in each county and the state. It is computed by dividing the total income of a group by the number of individuals in that group. Data are from the Regional Economic Information System (REIS) of the U.S. Bureau of Economic Analysis (accessed April 2009). www.bea.gov.

Population Below Federal Poverty Level:

1. *By Age Group* lists the percent of people in the categories "All Ages" and "<18" living below the federal poverty level.
2. *By income as a percent of the federal poverty level* lists four categories of the ratio of income in 1999 to the federal poverty level (FPL). For example, income equal to the federal poverty level (ratio 1.0) is 100% of the FPL; income half of the federal poverty level (ratio 0.5) is 50% of the FPL. The percent of people living below each of the four income categories is indicated. In 2000, the federal poverty level for a family of four was \$17,050 (source: Federal Register, Vol. 65, No. 31, February 15, 2000, pp. 7555-7557)

These data are from the U.S. Census 2000 Summary File 3 (SF3) data and are based on reported income for 1999.

Population with Health Care Costs Covered by a Government Payor:

The percent of the population on *Medicaid* is the count of persons enrolled in Medicaid for a minimum of one month during the 2009 state fiscal year (July 1, 2008 to June 30, 2009) divided by the 2008 Census population estimate for the area. An individual is counted for each county of enrollment (duplicated) but only once (unduplicated) for total state enrollment. Data were provided by the Medicaid Services Division of the DPHHS.

The percent of the population on *Medicare* is the count of all Montana-resident beneficiaries with any type of Medicare coverage during the month of June 2008 (mid-year) and not known to be deceased as of June 1, 2008, divided by the 2008 Census population estimate for the area. Medicare data were provided by the Mountain Pacific Quality Health Foundation.

The percent of the population enrolled in the Children's Health Insurance Plan (CHIP) is the count of all Montana children 19 and under enrolled in CHIP for at least one month during the 2009 state fiscal year, divided by the 2008 U.S. Census estimate for the area of children 19 and under. CHIP data were provided by the Children's Health Insurance Plan office of the DPHHS.

Medicaid Population Receiving Mental Health Services: The number of Medicaid-eligible persons who received mental health services, divided by the total number of Medicaid-eligible persons in county/state. Mental health service data were provided by the Addictive and Mental Disorders Division, DPHHS; the Health Resources Division, DPHHS, provided the data on Medicaid eligibility. All data are for state fiscal year 2008 (July 1, 2007 to June 30, 2008).

Population without Health Insurance: From the 2006 Small Area Health Insurance Estimates (SAHIE) from the U.S. Census, this is a measure of the percent of the Montana population without health insurance, public or private. <http://www.census.gov/did/www/sahie/index.html>.

Population with a Disability: From the 2000 U.S. Census, this measure indicates disability of the civilian, non-institutionalized population 18 years and older. Disability for this age group includes one or more of the following: a) blindness, deafness, or a severe vision or hearing impairment; b) a substantial limitation in the ability to perform basic physical activities, such as walking, climbing stairs, reaching, lifting or carrying; c) difficulty learning, remembering or concentrating; d) difficulty dressing, bathing or getting around inside the home; e) difficulty going outside the home alone to shop or visit a doctor's office; and f) difficulty working at a job or business.

Health Status Indicators

Fertility Rates: The fertility rate per 1,000 population is the five-year (2004-2008) sum of live births to females in each age group divided by the five-year sum of females in the same age group, multiplied by 1,000. The fertility rate for females ages 15 through 19 is referred to as the *teen fertility rate*, while the rate for females 15 through 44 is considered the *fertility rate for all women*. The populations of women younger than 15 and older than 44 are not used in the denominator because relatively few of the women in these age groups are likely to give birth. Including total populations for those age groups in the denominator would yield an underestimate of the true fertility rate. This calculation method, used throughout the U.S., yields a slight overestimate of the true rate. Data on births and fertility rates for the period 2004 through 2008 are from the Office of Vital Statistics, DPHHS.

Initiation of Prenatal Care: Measured as the number of births to women who began receiving prenatal care during the first trimester (the first three months) of pregnancy divided by the total number of

births for which the timing of initial prenatal care is known. These data represent five-year averages (2004-2008) and were provided by the Office of Vital Statistics, DPHHS.

Prior to 2008, the month prenatal care began was reported on the Montana birth certificate. Starting in 2008, the month of initiation is calculated based on the dates of birth and last normal menses.

Births with unknown timing of initiation of prenatal care were excluded from the total number of births (denominator) in calculating this percent. Editions of the County Health Profiles prior to 2002 included these births in the denominator and may have slightly underestimated the percent of women initiating prenatal care in the first trimester.

Adequate Prenatal Care (as measured by the Kotelchuck Index): Based on birth certificate data from the Office of Vital Statistics, DPHHS, for the years 2004-2008, this index attempts to characterize two dimensions of prenatal care.

1. Adequacy of initiation of prenatal care (i.e., the month care begins—assuming the earlier the care begins, the more adequate the prenatal care).
2. Adequacy of received services once prenatal has been initiated (a ratio of the actual number of visits to the expected number of visits as specified by prenatal care visitation standards for uncomplicated pregnancies, issued by the American College of Obstetricians and Gynecologists).

These two dimensions are combined into a single “Adequacy of Prenatal Care Utilization Index”. Readers unfamiliar with this index and its assumptions and limitations are referred to: Kotelchuck, M. 1994. American Journal of Public Health. Vol. 8: 1414-1420.

Births with unknown prenatal care status were excluded from the total number of births (denominator) in calculating this percent. Editions of the County Health Profiles prior to 2002 included these births in the denominator and may have slightly underestimated the percent of women receiving adequate prenatal care.

Live Births per 1,000 Population: The number of live births, divided by the total state population and multiplied by 1,000. Births are enumerated by the mother’s county of residence. The indicator is reported as a five-year rate (2004-2008). Data are from the Office of Vital Statistics, DPHHS.

Infant Mortality: The number of infant (birth to 364 days of age) deaths divided by the total number of live births, multiplied by 1,000. The indicator is reported as a five-year rate (2004-2008). Data are from the Office of Vital Statistics, DPHHS.

Infants Born at Low Birthweight: The number of births for which the weight of the newborn was less than 2,500 grams (5 lbs. 8 oz), divided by the total number of births, multiplied by 100. The indicator is reported as a five-year rate (2004-2008). Data are from the Office of Vital Statistics, DPHHS.

Mothers Who Smoked During Pregnancy: The number of babies born to mothers who smoked during pregnancy, divided by all births, multiplied by 100. The indicator is reported as a five-year rate (2004-2008). Data are from the Office of Vital Statistics, DPHHS.

Deaths per 1,000 Population: The number of deaths, divided by the total state population, multiplied by 1,000. Deaths are enumerated by the decedent’s county of residence. The indicator is reported as a five-year rate (2004-2008). Data are from the Office of Vital Statistics, DPHHS.

Median Age at Death: The midpoint in the range of ages at death (i.e., 50% of persons in the area were the median age or older at time of death). Either racial category may include “Hispanic”; “All” also includes unknown race. The indicator is reported as a five-year rate (2004-2008). Data are from the Office of Vital Statistics, DPHHS.

Leading Causes of Death: The three causes of death that occurred with greatest frequency from 2004 through 2008, the first cause listed being the most frequent. Death rates are not shown (except for heart disease and cause-specific deaths, see below) because they may be unreliable for many counties. Data are from the Office of Vital Statistics, DPHHS.

(CLRD=Chronic Lower Respiratory Diseases, an ICD-10 category which replaced the ICD-9 category Chronic Obstructive Pulmonary Diseases [COPD]. The categories differ in that CLRD does not contain those causes of death in ICD-9 rubric 495, which include “extrinsic allergic alveolitis”.)

Heart Disease Death Rate: The number of resident deaths from heart disease in 2004-2008 per 100,000 population. Both the *crude* rate and the *age-adjusted* rate are reported for heart disease due to the significant contribution of age to the incidence of death from heart disease. County level statistics may be unreliable due to small numbers and should be used cautiously.

Heart disease includes: acute rheumatic fever; chronic rheumatic heart diseases; hypertensive diseases (except essential hypertension); hypertensive heart and renal disease; ischemic heart disease; pulmonary heart disease and diseases of pulmonary circulation; and other forms of heart disease. Data are from the Office of Vital Statistics, DPHHS.

Cause-Specific Death Rates, provided for **Unintentional Injury Deaths (Motor Vehicle and Non-Motor Vehicle Related) and Suicide:** The number of resident deaths in 2004-2008 from the stated cause per 100,000 population. These rates are presented because Montana death rates are generally higher than national rates for these causes. County-level statistics may be unreliable and should be used cautiously. Deaths are tabulated by the deceased’s county of residence and therefore do not indicate where the accident, suicide or injury occurred. Data are from the Office of Vital Statistics, DPHHS.

Motor Vehicle Crashes Involving Alcohol: All reported motor vehicle crashes involving the use of alcohol in a given area, as a percent of all motor vehicle crashes in the same area. Data are for the five-year period 2003-2007, and include only crashes that were reported to the Montana Highway Patrol. When used as an indicator of the prevalence of drinking and driving among residents of a county/state, this measure may be limited by the inclusion of crashes involving non-residents, the exclusion of resident crashes that occurred in other counties/states, or by the absence of accidents that were not reported. Data are from the Montana Department of Transportation.

Cancer Incidence Rate: Number of new cancer cases diagnosed during the period 2003-2007 per 100,000 population. This incidence is **age-adjusted** to the 2000 U.S. standard-million population. The 1999 and earlier editions of this publication used the U.S. 1970 standard-million population and, therefore, *the cancer incidence rates in this edition cannot be compared to the rates in those editions*. The age-adjusted rates include all malignant cancers, plus in-situ bladder cancers. County incidence rates may be based upon a small number of cases and unstable; the 95% confidence interval is indicated in parenthesis. Where the number of new cases for the period 2003-2007 is less than 5, or the relative standard error is greater than 25 percent, the data have been suppressed (nsd=not sufficient data). Data are from the Montana Central Tumor Registry, DPHHS.

Chlamydia Incidence Rate: The number of reportable new cases of Chlamydia per 100,000 population during 2004-2008. Data are from the STD/HIV Section of the Communicable Disease Control and Prevention Bureau, DPHHS.

Health Resource Assessment

Local Hospitals, Critical Access Hospitals (CAH), Rural Health Clinics, Nursing Homes, Aging Services, and Home Care Services: Numbers of state licensed facilities are counts of licenses recorded as of July 2009 by the Licensure Bureau, Quality Assurance Division, DPHHS. Home health and hospice agencies may be licensed to deliver services in more than one county and are listed by each county of service delivery (duplicate count of agencies). The licensure list is continuously updated—the most current information available can be obtained by calling the Licensure Bureau at (406) 444-7770, or by accessing the DPHHS website.

Critical Access Hospitals are limited-service hospitals designed to provide essential services to rural communities. The Balanced Budget Act of 1997 established the Medicare Rural Hospital Flexibility Program (RHFP), which provided grants to states for designation of hospitals as Critical Access Hospitals. Due to relaxed staffing requirements and cost-based reimbursement for Medicare and Montana Medicaid patients, converting a struggling rural hospital to a CAH can allow a community to stabilize and maintain local health care access. The count of Critical Access Hospitals includes two IHS facilities: one in Big Horn County (Crow Agency) and one in Blaine County (Harlem).

When the number of beds is shown, it represents the total number of beds in all facilities of the stated type in the county/state.

Community Health Centers, and Indian Health Service (IHS) and Tribal Health Facilities: The Montana Primary Care Association maintains information on certified Rural Health Clinics and on federally qualified Community Health centers (supported in part by federal grants). The count of Community Health Centers in this publication includes satellite locations as well as five urban Indian health clinics (one each located in Great Falls, Helena, Missoula, Butte and Billings). This information was obtained at www.mtpca.org, and is current as of August 2009.

IHS facilities include hospitals, critical access hospitals and health centers/clinics. Health centers/clinics that are part of a hospital facility are not counted separately from the hospital. Tribal health facilities include health centers/clinics. Counts are combined into a single statistic, “IHS-Tribal Health Facilities”.

Availability of 9-1-1 Service: Based on information from the Montana Department of Administration's, Public Safety Services Bureau 9-1-1 Program, July 2009.

- Basic:* A 9-1-1 call goes over dedicated phone lines to the 9-1-1 answering point closest to the caller, where trained personnel then send the emergency help needed.
- Enhanced:* The emergency call is routed to the 9-1-1 center closest to the caller AND that the caller's phone number and address is automatically displayed.
- Wireless:* Information about phone number and location is also available for 9-1-1 calls made from a cellular phone.

Information is current as of August 2009. <http://pssb.mt.gov/911programs.mcp.x>.

Availability of Emergency Medical Services: The Emergency Medical Services (EMS) and Trauma Systems Program of the Chronic Disease Prevention and Health Promotion Bureau, DPHHS, provides information on the type, number and location of emergency medical service providers in each county, current as of July 2009.

Basic Life Support Service: Ambulance service or non-transporting medical unit capable of providing care only at the basic support level.

Advanced Life Support Service: Ambulance service or non-transporting medical unit with the capacity to provide care at the EMT-Paramedic equivalent level 24 hours a day, seven days a week.

Basic Life Support with Authorization for ALS: Ambulance service or non-transporting unit with the capacity to provide various levels of advanced life support services, but due to limited personnel, not necessarily on a 24 hours a day, 7 days a week basis.

See Administrative Rules of Montana (ARM 37.104.101) for further clarification.

Primary Care Provider Resources

Licensed Medical Doctors (MDs) and Doctors of Osteopathic Medicine (DOs): The Board of Medical Examiners (Montana Department of Labor and Industry) maintains records of **active, licensed** MDs and DOs in Montana (obtained in June 2009). The *estimated* count of full-time **and** part-time primary care MDs and DOs includes those listed with one or more of the following practice areas: family practice, general practice, geriatric practice, internal medicine, pediatrics, and obstetrics-gynecology. The list from the Board of Medical Examiners was cross-referenced with the Montana Medical Association Directory of Montana Physicians (2009) to verify practice location and/or potential retirement status.

As a federal entity, the Indian Health Service in Montana can and does employ physicians that are licensed elsewhere in the United States, while still active, permanent physicians within the state. A count of these physicians was obtained by contacting each IHS Service Unit, as well as the two tribally-operated health centers (Flathead and Rocky Boy's reservations), in September of 2009. Additionally, the Fort Harrison VA Hospital in Lewis & Clark County may also employ physicians licensed outside of Montana, although at present the facility does not employ any primary care physicians not licensed in the state.

Nurse Practitioners and Nurse Midwives: The Board of Nursing (Montana Department of Labor and Industry) maintains records of active, licensed nurse practitioners and nurse midwives in Montana. The counts in this publication are from a licensure list obtained in July 2009, and include **all** NPs and NMWs in the state, regardless of specialty. Please note that providers may not be listed in the county where they practice.

Physician Assistant Certified (PA-C): The Board of Medical Examiners (Montana Department of Labor and Industry) maintains records of active, licensed PA-Cs in Montana. The count of PA-Cs is from a licensure list obtained in July 2009, and includes **all** PA-Cs in the state, regardless of specialty. Please note that providers may not be listed in the county where they practice.

Dental Health Resources: The count of active, licensed Montana dentists and dental hygienists. Information obtained from the Board of Dentistry (Montana Department of Labor and Industry) in July 2009.

Health Care Provider Shortage Status: The Health Resources and Services Administration (U.S. Department of Health and Human Services) maintains an informational website about designations of Health Professional Shortage Areas (HPSA), Medically Underserved Areas (MUA) and Medically Underserved Populations (MUP). A lengthy definition of "underserved" can be found at <http://bhpr.hrsa.gov/shortage/muaguide.htm>.

“All” indicates the entire county has HPSA designation (either as a county designation or as a sum of smaller area designations), “Yes” indicates that there is a mental health designation in the county, while “None” indicates that there is either not a shortage, or an application for HPSA status has not been submitted or approved. “CCD” stands for Census County Division; “CT” stands for Census Tract. HPSAs are designated by the Health Resources and Services Administration.

The **basic** criterion for a primary medical care designation is 3,500 or more people served by a single primary-care physician. High need or risk indicators (i.e. high infant mortality rates, high birth rate, high percentage of poverty in population and/or insufficient capacity) may drop the required ratio to 3,000:1. The population-to-provider ratio for a dental shortage destination is 5,000:1, which may be dropped to 4,000:1 for areas with unusually high needs for dental services. For a mental health shortage designation, the ratio is 6,000 population per core mental-health professional, to be dropped to a 4,500:1 ratio for populations with unusually high needs for mental health services. More detailed criteria can be found at <http://bhpr.hrsa.gov/shortage/hpsadesignation.htm>.

HPSA designation may be awarded based on the following specialties:

- A. Primary Medical Care HPSA—Areas with shortages of primary care physicians (Family Practitioners, General Practitioners, Obstetricians/Gynecologists, Pediatricians, General Internal Medicine).
- B. Mental Health HPSA—Areas with shortages of mental health professionals (Psychiatrists, Clinical Psychologists, Psychiatric Nurses, Clinical Social Workers, and Marriage and Family Therapists).
- C. Dental HPSAs—Areas with shortages of dentists, dental hygienists and dental auxiliaries.

HPSA designations were obtained from <http://bhpr.hrsa.gov/shortage/index.htm> and are accurate as of 7/31/09.

Sources for American Indian Data

In the section of this publication that provides a health profile for Montana’s American Indian population, some of the sources used differ from those used for the county and state profiles, due to the need for data that are disaggregated by race. The sources and definitions for the American Indian profile are detailed below.

Population Characteristics: All population figures, including median age, educational attainment, unemployment, income and poverty, were obtained from the 2007 American Community Survey, released by the U.S. Census Bureau in 2009.

Population with Health Care Costs Covered by a Government Payor: *Medicaid* participation rates are for SFY2009, and were obtained from the Medicaid Services Division, MT DPHHS; *Medicare* participation rates are for calendar year 2008, and were obtained from the Mountain Pacific Quality Care Health Foundation; and *CHIP* numbers are for SFY2009, and were obtained from the Children’s Health Insurance Program, MT DPHHS.

Percent of Medicaid Population Receiving Mental Health Services: For SFY2008, obtained from the Mental Health Services Division, MT DPHHS.

Vital Data: All statistics pertaining to births and deaths were obtained from the Office of Vital Statistics, MT DPHHS, and cover the five-year period from 2004 through 2008.

Percent of Motor Vehicle Deaths Involving Alcohol: From Montana Department of Transportation, and covering the five-year period from 2003 through 2007.

Cancer Incidence Rate: From Montana Central Tumor Registry, MT DPHHS, and covering the 5-year period from 2003 through 2007.

Chlamydia Incidence Rate: From Communicable Disease Control and Prevention Bureau, MT DPHHS, for the five-year period from 2004 through 2008.

Sources for National Data

Where health data for Montana is displayed alongside data for the United States, the data sources are different from those used for the local profiles. This change in sources was necessary to obtain data with identical sources and definitions for the state and the nation. The sources and definitions for the Montana/US profile are detailed below.

Population by Gender, Race and Age; Educational Attainment; Per-Capita Income; Population Below Federal Poverty Levels; Population with a Disability: From the 2007 American Community Survey, released 2009. “White” and “American Indian” race categories include those of one race only; “Other” includes all other single-race persons, as well as those indicating two or more races.

Unemployment Rate: 2008 unemployment data for the US and for Montana from the U.S. Bureau of Labor Statistics. Accessed July 2009. <http://www.bls.gov/bls/proghome.htm>.

Population with Health Care Costs Covered by a Government Payor: The percent of the population on Medicaid, Medicare and SCHIP constitutes the count of persons enrolled in each program for a minimum of one month during 2006 (Medicaid) and 2007 (Medicare, SCHIP), divided by the Census population estimate for the eligible population for 2006 and 2007, respectively. Data obtained from the 2009 Statistical Abstract of the United States.

Medicaid Population Receiving Mental Health Services: *Currently no national source.*

Population without Health Insurance: From the 2009 Statistical Abstract of the United States, this is a measure of the percent of Montana and U.S. populations without health insurance, public or private. The data reflect 2006 rates.

Vital Statistics: Data on birth- and death-related events are from the National Vital Statistics preliminary 2007 birth data and final 2006 death data.

Median Age at Death: Montana data are for 2006, from the Office of Vital Statistics, MT DPHHS. National data are from the National Center for Health Statistics, 2006 Vital Statistics microdata, courtesy of Robert Anderson, Ph. D., Mortality Statistics Branch Chief (via email).

Motor Vehicle Fatalities Involving Alcohol: All alcohol-impaired driving fatalities; national 2008 data from the National Highway Traffic Safety Administration’s State Traffic Safety Information. <http://www-nrd.nhtsa.dot.gov/Cats/index.aspx>.

Cancer Incidence Rate: Number of new cancer cases diagnosed during the five-year period from 2001 through 2005. Data are from the National Program of Cancer Registries, Centers for Disease Control and Prevention. <http://www.cdc.gov/cancer/npcr/>.

Chlamydia Incidence Rate: Number of new reportable cases of Chlamydia per 100,000 population during 2007; from the STD Section, National Center for Health Statistics. <http://www.cdc.gov/std/>.

Community Hospitals, Nursing Home Facilities: National data are from the 2009 Statistical Abstract for the United States. "Community hospital" is defined as "[s]hort-term (average length of stay less than 30 days) general and special (e.g., obstetrics and gynecology; eye, ear, nose and throat; rehabilitation, etc. except psychiatric, tuberculosis, alcoholism, and chemical dependency). Excludes hospital units of institutions." Numbers reflect 2006 counts.

Nursing homes included are those licensed and/or certified in the conterminous United States with three or more beds. Numbers reflect 2004 counts.

The rates provided reflect number of beds per 1,000 population.

MDs; Nurses; Dentists; Dental Hygienists: 2009 Statistical Abstract for the United States. Numbers provided are for **active** physicians of all specialties (excluding doctors of osteopathy), and for **all** nurses.

Health Professional Shortage Area Status: 2009, U.S. Department of Health & Human Services.

2009 HEALTH PROFILES: MONTANA AMERICAN INDIAN

HEALTH STATUS INDICATORS	Montana American Indian		Montana Total Population	
	Females 15-19	Females 15-44	Females 15-19	Females 15-44
Fertility Rates (births per 1,000 per age group) ⁶	107.1 (n=1,728)	107.7 (n=7,733)	37.9 (n=6,199)	66.8 (n=60,473)
Prenatal Care (percent beginning care in 1st trimester; percent receiving adequate care) ⁶	1 st Trimester	Adequate Care	1 st Trimester	Adequate Care
	52	57	65	76
Live Births per 1,000 Population ⁶	24.6 (n=7,758)		12.8 (n=60,618)	
Infant Mortality (deaths per 1,000 live births) ⁶	9.3 (n=72)		6.1 (n=367)	
Percent of Babies born at Low Birthweight (< 5 lbs. 8 oz.) ⁶	8		7	
Percent of Mothers Who Smoked During Pregnancy ⁶	27		18	
Deaths per 1,000 Population ⁶	7.3 (n=2,289)		9.0 (n=42,499)	
Median Age at Death (in years) ⁶	All		All	
	59 (n=2,289)		78 (n=42,499)	
	Male	Female	Male	Female
	56 (n=1,249)	63 (n=1,040)	75 (n=21,523)	82 (n=20,976)
Leading Causes of Death ⁶	1. CANCER	2. HEART DISEASE	1. CANCER	2. HEART DISEASE
	3. ACCIDENTS		3. CHRONIC LOWER RESPIRATORY DISEASE	
Heart Disease Death Rate (per 100,000 population) ⁶	110.7 (n=349)		198.3 (n=9,369)	
Age-adjusted Heart Disease Death Rate ⁶	202.9		168.8	
Unintentional Injury Death Rate (per 100,000 pop.) ⁶				
Non-Motor Vehicle	61.5 (n=194)		61.0 (n=2,881)	
Motor Vehicle	88.5 (n=279)		25.5 (n=1,205)	
Percent of Motor Vehicle Deaths Involving Alcohol ⁷	DNC		10 (n=10,989)	
Suicide Rate (per 100,000 population) ⁶	24.4 (n=77)		20.3 (n=961)	
Cancer Incidence Rate (95% confidence interval) ⁸	527.5 (+/- 35.8)		455.5 (+/- 5.8)	
Chlamydia Incidence Rate (reported cases per 100,000) ⁹	1,226.2 (n=783)		285.3 (n=13,494)
